

ENDODONTOLOGY REVIEW

This course provides an intensive review of the biology and related scientific foundations of Endodontology, while maintaining a strong clinical perspective. Internationally known speakers will present the latest information, supported by the best current and classic literature. Comprehensive lecture information, study questions and literature summaries, with references will be provided.

The course is an ideal review for candidates taking the American Board examinations, but its usefulness is not limited to Board candidates. The scope of topics covered makes the course ideal for practicing Endodontists and general dentists who wish to expand their knowledge of the biologic principles behind clinical practice.
